The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) at cotraat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in diagnostics for generic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Assat197-Aas94564 represent novel human diagnostic coding sequences. Assat197-Aas94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the inventor.

                                                                                                                                                                                                                                                                                                                                                                                              New isolated human differentially-regulated breast cancer polynucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are this patent did not form part of the printed specification, but was obtained in electronic formet directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated protein complex comprising 2 proteins. The protein complex comprises: (a) a first protein (P1) and a second protein (P1); (b) a fragment P1 and P2; (c) P1 and a fragment P2; and (d) a fragment of P1 and a fragment P2. The first and second proteins of the complex are selected from: (i) P1 is SET, and P2 is PN12218; (ii) P1 is TTP and P2 is CN85 or PN13734; or (iii) P1 is TAR and P2 is EVIPP1. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of physiological disorders involved in the protein interaction, such as inflammatory disease, modulators, inhibitor or compounds are useful for treating the diseases described above. The present sequence represents the nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Neuroprotective; cytostatic; dermatological; immunosuppressive; tumour; antiinflammatory; anti-HIV; antibacterial; antiinflammatory; cancer; immune system disorder; rheumatoid archritis; inflammatory condition; organ transplant rejection; infection; hepatitis C; blood disorder; sickle cell anaemia; hyperproliferative disorder; Gaucher's disease; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; chromosomal abnormality; bown syndrome; ischaemia; renal disorder; cardiovascular; respiratory; wound healing; endocrine; Addison's disease; reproductive system; gastrolinestinal; liver disorder; AlDS; ds; acquired immune deficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA encoding novel signal transduction pathway protein, Seq ID 1313.
                                                                                                                                                                                                                                                                                                                        New isolated protein complex comprising a first and second protein, useful for the diagnosis and treatment of disorders involved in the protein-protein interaction, such as inflammatory disease, atherosclerosis or hypoxic brain injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 8490 BP; 2392 A; 1901 C; 1823 G; 2374 T; 0 U; 0 Other;

```
The invention relates to novel isolated polypeptides (I), and display to (I). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. congenital and acquired immunodeficiencies, autoimmune crejections and graft versus host disease, infectious diseases (reg. pepatitis C), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative disorders, primary haematopoietic disorders, hyperproliferative disorders (e.g. Gaucher disease) and cancer), neurodegenerative disorders (e.g. Alzhehmer's disease, Parkinson's disease), chromosomal abnormalities (c.g. Lown syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g. Glown syndrome), acatiovascular disorders (e.g. arthythmia), respiratory disorders, dermatological disorders (e.g. Addison's epithelial cell proliferation, endocrine disorders (e.g. Addison's disease), reproductive system disorders, gastroinesstinal disorder (inflammatory disorders), liver disorders (cirrhosis), as stimulators of B-cell responsiveness to pathogens, activators of T-cells, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AASZ67676-AASZ7850 represent novel signal transduction pathway protein coding sequences and PCR primers of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Neuroprotective; cytostatic; dermatological; immunosuppressive; tumour; antiinflammatory; anti-HIV; antibacterial; antiinflammatory; cancer; immune system disorder; rheumatoid arthritis; inflammatory condition; organ transplant rejection; infection; hepatitis C; blood disorder; sickle cell anaemia; hyperproliferative disorder; Gaucher's disease; neurodegenerative disorder; Alzheimer's disease; parkinson's disease; chromosomal abnormality; Down syndrome; ischaemia; renal disorder; cardiovascular; respiratory; wound healing; endocrine; Addison's disease; reproductive system; gastrointestinal; liver disorder; AlbS; ds; acquired immune deficiency syndrome.
                                                                  Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA encoding novel signal transduction pathway protein, Seq ID 1312.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 29220 BP; 7863 A; 6353 C; 6337 G; 8667 T; 0 U; 0 Other;

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders.

```
disease
The invention relates to novel isolated polypeptides (I), and the invention relates to novel isolated polypeptides (I), and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immundeficiencies, autoimmune corrected as the congenital and acquired immundeficiencies, autoimmune disorders (e.g. thematoid arthritis), inflammatory conditions, organ transplant respections and graft versus host disease, infectious diseases (e.g. thematics (), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative (e.g. disorders, primary haematopoietic disorders, hyperproliferative disorders (e.g. Gaucher's disease, Parkinson's disease), chromosomal abnormalities (c.g. Alzheimer's disease, Parkinson's disease), chromosomal abnormalities (c.g. Alzheimer's disease, primson's disease), cardiovascular disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders (in wound healing, epithelial cell proliferation, endocrine disorders (e.g. Addison's disease), reproductive system disorders, garrhythmia, epithelial cell proliferation, endocrine disorders (inflammatory disorders), liver disorders (cirrhosis), as stimulators of B-cell responsiveness to pathogens, activators of T-cells, to induce (inflammatory disorders), and as a means to oinduce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAS25976-AAS27850 represent novel signal transduction pathway protein coding equences and PCR primers of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the polypeptide is also useful for identifying a binding partner and determining whether the binding partner or othe polypeptide. The polypeptide is also useful for identifying a binding partner and determining whether the binding partner or effects an activity of the polypeptide. The polypeptide or the mucleic acid encoding the polypeptide is useful for preventing, treating, or amelicating a medical condition, which involves administering the polypeptide or the mucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to a pathological condition and subject, which involves determining the presence or absence of a mutation in the nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition and subject, which involves determining a pathological condition and subject in the mutation. The polypeptide, the nucleic acid and an antibody to the polypeptide are useful for treating autoimmune disease, parkinson's disease, silicosis, gastroinrestinal disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; SEQ ID NO 1312; 345pp; English.

```
the nucleic acid and the antibody are useful as immunosuppressive agents, as a salivants to enhance elements esponses, and as agents to induce higher affinity antibodies and increase serum immunoglobulin concentrations. The present sequence represents DNA encoding a novel human protein. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format direct from USPFO at sequence.html?DocID=20020168711.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ds; gene; human; autoimmune disease; Parkinson's disease; silicosis; gastrointestinal disease; atherosclerosis; haemophilia; thrombocytopenia; fimunosuppressive agent; adjuvant; enhance immune response; higher affinity antibody induction; increased serum immunoglobulin concentration.

```
The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the polypeptide is also useful for identifying a binding partner to the polypeptide is also useful for identifying a binding partner and determining whether the binding partner of the polypeptide is useful for identifying a binding partner and determining whether the binding partner of effects an activity of the polypeptide is useful for preventing the condition, which involves administering the polypeptide or the nucleic acid to a manalian subject. The nucleic acid a must pathological condition or a susceptibility to a pathological condition in a subject, which involves determining the presence or absence of a mustation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 29220 BP; 7863 A; 6353 C; 6337 G; 8667 T; 0 U; 0 Other;

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sample indicates the cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                               soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Barly detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue sarcoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 158811 BP; 50626 A; 28156 C; 29409 G; 50620 T; 0 U; 0 Other;

The present invention describes a method for separating multipotential neural progenitor cells from a mixed population of cell types in which a promoter functioning selectively in the neural progenitor cells is selected. A nucleic acid molecule encoding a fluorescent protein is introduced to all cell types of the mixed population of cell types under control of the promoter. Only the neural progenitor cells (not the other cell types) are allowed to express the fluorescent protein, cells of the mixed population of cell types that are fluorescent, which are restricted to the neural progenitor cells, are identified. The separated cells are separated from the mixed population of cells, The present invention also describes: (1) an isolated human musashi promoter; and (2) an enriched or the method is used for separating multipotential neural progenitor cells. The method is used for separating multipotential neural progenitor cells from a mixed population of cell types. The present sequence represents from a mixed population of cell types. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolation and purification of multipotential neural progenitor cells and multipotential neural progenitor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 52216 BP; 13494 A; 12460 C; 12362 G; 13900 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents the human musashi promoter, which is used in the method of the invention. The specification describes a method for separating multipotential neural progenitor cells from a mixed population of cell types. The method comprises introducing a nucleic acid encoding a fluorescent protein under control of a promoter which selectively boulation, allowing only the progenitor cells to express the fluorescent protein, and identifying and separating cells that are fluorescent protein, and identifying and separating cells that are fluorescent isolation and purification of multipotential neural progenitor cells, especially neural stem cells from adult brain. The isolated cells are used in both basic analyses of precursor and stem cell growth control, as well as in more applied studies of their transplantability and cells in more applied studies of their transplantability and control, as well as in more applied studies of their transplantability and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Separating multipotential neural progenitor cells from a mixed population of cells, involves introducing nucleic acid molecule encoding fluorescent protein under promoter control, and separating fluorescent cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          engraftment characteristics. The cells are useful in support of the structural repair of the damaged central nervous system, such as in the traumatized brain, or the contoured, traumatized or transected spinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Serine RESULT g ଚ ö Mammalian serine racemase preparations, used to identify modulators which can be used to treat diseases associated with N-methyl-D-aspartate receptor overactivation, e.g. Alzheimer's disease. The present sequence is that of primer B, designed for use with primer A (see AA170576) in the PCR amplification of human serine racemase cDNA (see AA170575). The expected size of the specific PCR product is 536 bp. Human cDNA phage libraries were used as templates in PCR analysis in order to determine the expression pattern of serine racemase mRNA in human tissue. The invention provides methods of regulating serine racemase activity in order to increase or decrease Dusaring serine and thereby increase or decrease glutamate N-methyl-D-aspartate (NMDA) receptor activation. A decrease glutamate N-methyl-D-aspartate (NMDA) receptor activation. A decrease in D-serine formation may aid in the Regulation of Ineuron damage following an ischaemic event, such as stroke. Regulation of D-serine formation may also aid in the treatment of other neurodegenerative conditions caused by the over- or under-activation of for Serine racemase; N-methyl-D-aspartate receptor; neural death; neural dysfunction; NMDA receptor; Parkinson's disease; Huntington's disease; motor neurone disease; Alzheimer's disease; ss. Polynucleotide encoding serine racemase enzyme and the enzyme useful screening reagents regulating the activity of the enzyme in a neuron disease caused by over- or under-activation of glutamate N-methyl-D-8 Brady ô Wolosker H, Sheth K, Masaaki T, Mothet J, Score 16; DB 4; Length 29; Pred. The present sequence represents a fragment of a mammalian serine racemase gene. The racemase polypeptide has a specific activity of at least 0.003 micromole Lescrine/mg/hour. The enzyme catalyses the direct racemisation of Lescrine to Desrine. Desrine appears to be an endogenous ligand of Neuthyl-D-aspartate (NMDA) receptors. The mammalian serine racemases can be used to identify modulators, which can be used in the treatment of acute or chronic neural death or dysfunction mediated by overactivation of N-methyl-D-aspartate (NMDA) receptors. Overactivation of the receptors is associated with Parkinson's disease, Huntington's disease, motor neurone disease and Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polynucleotide encoding serine racemase enzyme and the enzyme useful for screening reagents regulating the activity of the enzyme in a neuron disease caused by over- or under-activation of glutamate N-methyl-D-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of cDNA encoding human serine racemase (see AAM50262). The polynucleotide can be used in the production of recombinant serine racemase enzyme, or for the detection of serine

damage following various nervous system diseases is often caused by activation of glutamate N-methyl-D-asparate (NMDA) receptors in the brain. This receptor is activated by the binding of D-serine. Requlation of D-serine levels through regulation of serine racemase may therefore prevent or minimise neuron admage in neurogenic and myopathic disorders, neurodegenerative disorders such as Alzheniaer's disease and Parkinson's disease, and disorders such as Alzheniaer's disease and Parkinson's cacemase polypeptides and polymolectides are used in claimed methods of screening for adents that modulate or decrease the activity of serine racemase. Also claimed is a pharmaceutical composition comprising either an expression vector that contains a serine racemase polymulectide, or a cagent that modulates serine racemase polymule activity. This is used to modulate serine racemase enzyme activity. This is used to damage or a neurodegenerative disease caused by the over- or under-
polynucleotides. Expression vectors and host cells are claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1336 BP; 386 A; 268 C; 319 G; 362 T; 0 U; 1 Other;

```
The present sequence is a cDNA encoding human pyridoxal phosphate dependent enzyme 22406 which is a serine racemase. Human 22406 gene is located on chromosome 17 between D17849 and D178796. The protein 22406 is a modulator of D-serine. D serine has been shown to modify behavioural changes associated with learning, memory and convolsions. Human 22046 and diagnose neurodegenerative disorders including Alzheimer's disease, schizophrenia as well as quell anxiety and epilepsy and prevent damage from stroke as well as quell anxiety and epilepsy and prevent damage from stroke as well as cardiac (heart failure, rheumatic heart failure) and circulatory disorders, liver disorders (benign enlargement, nodular lung disorders, prostrate disorders (benign enlargement, nodular hyperplasia), colon disorders (action and dermal fibroblast disorders. Human 22406 cDNA is also useful in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

```
The present invention relates to the isolation of a novel human pyridoxal phosphate dependent enzyme family member (22406), a human argued enzyme family member (22406), a human aminotransferase (25233), human ring finger proteins (8035 and 8424), a human minotransferase (25233), human ring finger proteins (8035 and 8424), a human APP- minopeptidase (55304), a human metallopeptidase (52299), a human APP- ribosyltransferase (1999), and a human melanoma associated antigen (5200). Also disclosed are the polynucleotide sequences encoding these novel human proteins. The polynucleotides and polypeptides of the present invention are useful for diagnosing and treating disorders, such as heart canner, human proteins, heart disease, myocardial infarction, hypertension, perioarditis, atherosclerosis, hepatic fallure, viral hepatitis, cancer, intracerebral haemorrhage, brain abscess, Alzheimer's disease, Pick disease, inflammatory bowel disease, Crohn's disease, benign prostatic hypertrophy and systemic lupus erythematosus. The present sequence
                                                                                                                                                                                                                                                                                                                                    New isolated 22406 nucleic acids and polypeptides, useful for diagnosing and treating 22406-mediated disorders, such as myocardial infarction, hypertension, atherosclerosis, viral hepatitis, cancer and/or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1770 BP; 499 A; 379 C; 410 G; 482 T; 0 U; 0 Other;

Primer sets for synthesizing polymucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

Claim 8; SEQ ID NO 15148; 2537pp + Sequence Listing; English.

The present invention describes primer sets for synthesising 5602 full
[and no ligo-dr primer and an oligonaclectide complementary to the

[complementary strand of a polynuclectide which comprises one of the 5602

[complementary strand of a polynuclectide which comprises one of the 5602

[complementary strand of a polynuclectide which comprises one of the 5602

[complementary strand of a polynuclectide which comprises a complementary to the

[complementary strand of a polynuclectide which comprises a 5'-end

[complementary strand of a polynuclectide which comprises a 5'-end

[complementary strand of a polynuclectide which complementary to a sequence and an oligonuclectide comprising a sequence complementary to a polynuclectide which comprises a 1'-end sequence, where the complementary to a polynuclectide comprises a 1'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in specification. The primers are useful for synthesising polynuclectides, particularly full-length cDMAs. The primers are also useful for the full-length cDMAs. The primers are also useful for the full-length cDMAs. The primers allow obtaining of the full-length cDMAs and sequences; AAB13632 to AAB13632 represent human amino acid sequences; and AAB13629 to AAB13622 represent complementary and in the exemplification of the present invention

Identifying a candidate p21 pathway modulating agent, useful for treating a disease such as cancer, comprises contacting an assay system comprising a MP21 polypeptide or nucleic acid with a test agent.

Example 2; SEQ ID NO 48; 392pp; English.

This invention relates to a novel candidate p21 pathway modulating agent by contacting an assay system comprising an MP21 (modifier of p21) to polypeptide or nucleic acid with a test agent, where in the absence of the test agent the system provides a reference activity and detecting a test agent-biased activity of the assay system. The invention may be useful for the production of compounds with a cytostatic activity through modulation of MP21 protein activity. The MP21 polypeptide or nucleic acid can be used for identifying MP21 modulating agents useful as therapeutic targets for diagnosing cancer or treating disorders associated with care useful in diagnosis, therapy, for example treating cancer, and pharmaceutical development. The genetically modified animals may be used for in vivo assays to test for activity of a candidate p21 modulating agent, or to further assess the role of MP21 in a p21 pathway process. The present sequence is that of a human MP21 gene which is an orthologue of a prosophila p21 modifier and which was used in the exemplification of the invention.

Sycamore 18. June 18. Super Centre, Hinxton, Cambridgeshire, Submitted (18-JUL-2001) Sanger Centre, Hinxton, Cambridgeshire, Submitted (18-JUL-2001) Sanger Centre, Hinxton, Cambridgeshire, Callo 18. UK. Lamil enquirtes: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk compared serounds sequence assembly data is compared from overlapping clones. During sequence are found these are annotated as variations where differences are found these are annotated as variations where the corresponding to the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Emi. EMBL; Sw.; SWISSPROT; Tr.; TREMBL; WD.; WORMPEP; Information on the WORMPEP charactions are used to associate primary accession on the WORMPEP charactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr9
RRDI-3011 is from the library RPCI-11.1 constructed by the group of bieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ALISS692 78376 bp DNA linear PRI 18-JUL-2001
Human DNA sequence from clone RPI1-3411 on chromosome 9, complete
sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  secontig of 1025 bp in length gap of unknown length contrig of 1257 bp in length contig of 1131 bp in length gap of unknown length gap of unknown length gap of unknown length contig of 1235 bp in length contig of 1067 bp in length gap of unknown length contig of 1397 bp in length contig of 1397 bp in length contig of 1397 bp in length contig of 1396 bp in length gap of unknown length contig of 1395 bp in length contig of 1395 bp in length

On May 13, 2003 this sequence version replaced gi:23110872.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 * NOTE: Estimated insert size may differ from sequence length

(see http://www.ngsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs.

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* In 217073: contig of 217073 bp in length.
                                                                                                                                                                                                                                                            Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping close name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping close, as we submit sequences with only a small overlap as described above.

This sequence was fainished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw., SMISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP database can be found at the proposed from part of bacterial clone contigs of human chromesome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.anger.ac.uk/HGP/Chri

RP4-796F18 is from the library RPCI a constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

On Sep 19, 2000 this sequence version replaced gi:10039951.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Assembly program: XGAP4; version 4.5
Assembly program: XGAP4; version 4.5
Sequencing vector: plasmid; 100872; 1100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Consensus quality: 164394 bases at least Q40
Consensus quality: 166722 bases at least Q30
Consensus quality: 168063 bases at least Q30
Insert size: 168847; sum-of-contigs
Unsert size: 194310; 2.8% error; agarose-fp
Quality coverage: 4.86x in Q20 bases; sum-of-contigs Quality
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               * NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24321: contigo of 3615 bp in length 24421: contigo of 2930 bp in length 27351: contig of 2930 bp in length 27451: gap of 100 bp 2421: gap of 100 bp 34221: gap of 100 bp in length 3757: contig of 3236 bp in length 3757: contig of 3236 bp in length 3757: gap of 100 bp in length 3767: gap of 100 bp in length 50940: contig of 13383 bp in length 51040: gap of 100 bp

                                                                                                                    Direct Submission

Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 19, 2002 this sequence version replaced gi:23194726.

The sequence in this sesembly is a combination of BAC based reads and whole genome shorgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas sesembly (a 'contig-scaffold'). Mithin each contig described in dividual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 3 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 76 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

3844: gap of unknown length
3844: gap of unknown length
5803: contig of 1189 bp in length
5103: gap of unknown length
6408: gap of unknown length
7722: gap of unknown length
7722: gap of unknown length
8827: contig of 1214 bp in length
8827: contig of 1105 bp in length
10190: contig of 1105 bp in length
10290: contig of 1105 bp in length
11553: gap of unknown length
11553: gap of unknown length
11553: gap of unknown length
11553: contig of 1330 bp in length
11499: gap of unknown length
11553: contig of 1224 bp in length
14499: contig of 1224 bp in length
14499: contig of 1224 bp in length
15723: contig of 1224 bp in length
17322: contig of 1250 bp in length
17332: gap of unknown length
17332: contig of 1250 bp in length
18582: contig of 1250 bp in length
18682: contig of 1679 bp in length
18682: contig of 1679 bp in length
18682: contig of 1679 bp in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             11374

It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Center: Washington University Genome Sequencing Center Center code: WUGSC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission

Submitted (10-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 20, 2002 this sequence version replaced gi:23321944.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.read/lprojects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature table.

NOTE: This is a "working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           87.0%; Score 17.4; DB 2; Length 252630; 94.7%; Pred. On Nov 20, 2002 this sequence version replaced gi:23267686.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Department
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Worley, K.C.

```
by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole ghotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html) NOTE: This sequence may represent more than one clone. NOTE: This is a "working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Assembly program: Phrap, version 0.990329

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protocol: WGS-discovery: Paired-end low-coverage whole genome shotgun reads were generated from 129S1/SvImJ, C3H/HeJ, and BALB/CByJ. The WGS reads were placed uniquely on the MGSCV3 C57BL/6J assembly and SNP detection was carried out by SSAHA-SNP. 225,000 reads were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            as STSs and 81,000 SNPs were annotated with alleles from CS7BL/6J and the strain from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone amen. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em., EMBL; Sw., SWISSROT; Tr., TREMBL; Wp:, WORNPEP; Information on the WORMPEP database can be found at the wormpep clone-derived Zebrafish puc subclones occasionally display inconsistency over the length of monouncleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be
                                                                                                                                                                                                                                                                                                                                                BX276188 177660 bp DNA linear VRT 28-APR-2004 Zebrafish DNA sequence from clone CH211-245A19, complete sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              184975 bp DNA linear PRI 07-
Human DNA sequence from clone RP3-435D1 on chromosome Xq25,
complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

Quality cov.
* Working draft' sequence. It currently
* consists of 23 contigs The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* truis of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

On Sep 14, 2002 this sequence version replaced gi:21908462.

On Sep 14, 2002 this sequence version replaced gi:21908462.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assemble using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ms to the estimated size. The sequence contigs within a contig-scaffold that consists marizely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences in the feature

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

ON Nov 15, 2002 this sequence version replaced gi:23603922.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-seaffold'). Within each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-seaffold'). Within each contig desparated by sized gaps filled with Ns to the estimated size. The sequence contigs are contented and oriented, and sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature Pasternak, S., Paul, H., Perez, A., Perez, L., Pfannkoch, C., Plopper, F., Poindexter, A., Popovic, D., Primus, E., Pul. L. L., Publaco, Reigly, R., Rendra, R., Reigly, R., Reigly, R., Reigly, M., Ren, Y., Reuter, M., Rose, R., Ruiz, S. J., Riges, C., Sander, W., Savery, G., Scherer, S., Scott, G., Shateman, S., Shen, H., Sheetty, J., Shvartsbeyn, A., Sisson, I., Sitter, C.D., Smajs, D., Steeimle, M., Strong, R., Sutton, A., Svatel, A., Tabor, P., Taylor, T., Thomas, N., Thomas, S., Tingey, A., Trejos, Z., Usmani, K., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Wang, G., Wallson, R., Wullson, R., Wei, K., Wei, K., Wei, K., Waisht, D., Wright, D., Wright, D., Wright, D., Wright, D., Waright, M., Weiss, R., Smith, D.R., Jonn, D., Von Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Wainstock, G. and Gibbs, R.A. * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have provided by the submittor.
This sequence will be replaced
by the finished sequence as soon as it is available and
the accession number will be preserved.

1 247649: contig of 247649 bp in length.

On May 9, 2003 this sequence version replaced gi:24818314.

The Sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a caffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold', minimized and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

NOTE: This sequence may represent more than one clone.
NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Consensus guality: 243899 bases at least Q40
